# Project Overview

Robot Application Center developed a decision tree engine to help partners deciding if a particular investment is profitable or not. Currently they use a desktop application to generate surveys, and through this application they deploy a final-user application to answer these surveys.

# **Project Goals**

#### **Develop two applications:**

- An admin desktop web application to create general decision trees.
  - Allow admin to create/modify/delete decision trees.
- An end-user mobile app to let final users answer these trees.
  - Allow end-users to generate a summary to evaluate if their investments will be profitable.

### Client overview

#### Client details:

- Andreas Runfors Primary client (Application owner)
- Erik Hellström Secondary client/proxy (Robotic Application Center)

#### **Project Team/Client Interaction:**

- Meetings questions prepared beforehand
- Email

# Mockups

#### Choose language

# Mockups

Send to e-mail?

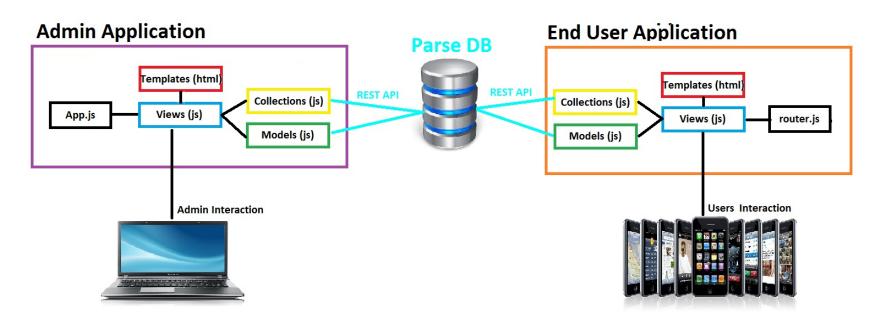

### End-users feedback

- The logo is too space consuming
- Subscription payment What for?
- Surprised by the sudden mention of a report
- Summary font-size too small
- Overall cluttered with information

### Customer feedback

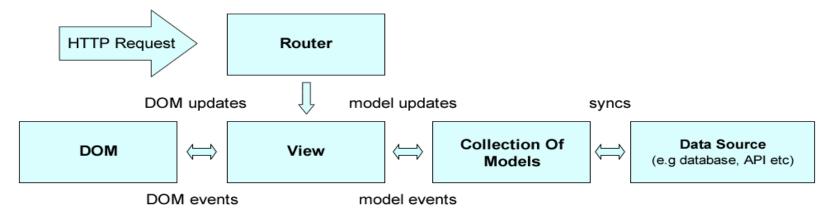

- Splash screen of logo,
- Choose a default language at startup
- Remove "Subscription"
- Be able to switch language on the fly
- Keep the relevant subject as a header
- Format long texts
- Remove unnecessary pages
- Redo the report/summary

### High-level/architectural design

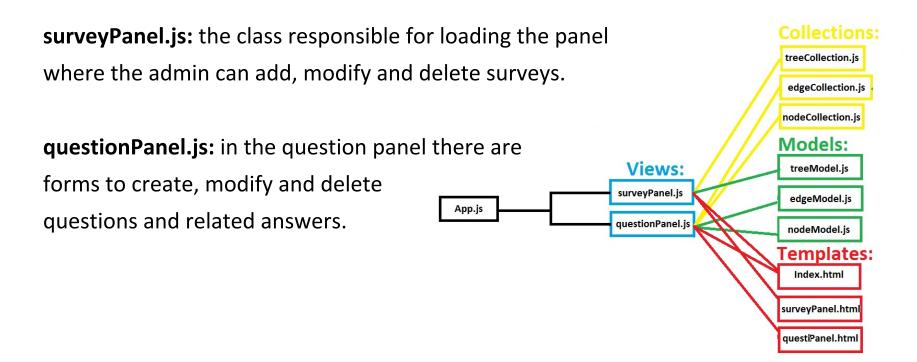

# Main design decisions

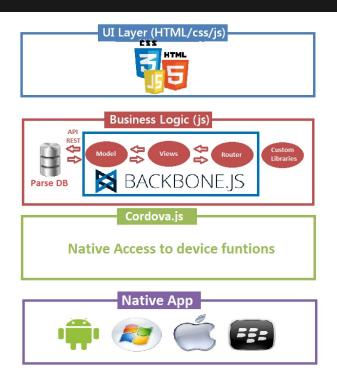

- Using Backbone.js for both the apps (MVC architecture)
- Shared Online Database (PARSE)
- Shared Models (API)

# Administrator application

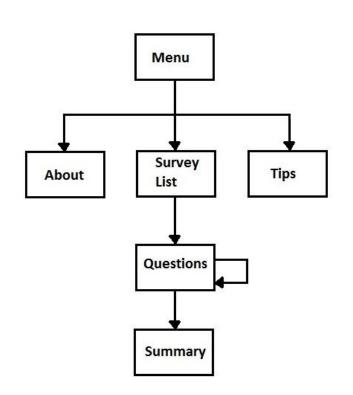

# **End-User Application**

# **End-user Application**

#### Main functionalities:

- Be able to work offline
- Generate a summary after the survey is completed
- Save state of answered questions
- Contact administrator
- Multiple languages support

### What we have done so far

#### Common stuff:

- DB struct
- Rest API
- Part of models and collection

#### Admin APP:

- Survey panel
- Html of everything
- Tree collection
- Tree model

#### End-user App:

- Menu
- Choose survey
- Tree collections
- Tree models
- Mock-ups

## **DEMO**

### Features to be implemented

#### Common stuff:

- We don't have to do anything else

#### Admin APP:

- Question panel
- Edge and node collections
- Edge and node models

#### End-user App:

- Summary
- Question page?
- Node and edge models
- Node and edge collections

Here we can show this <a href="https://docs.google.com/spreadsheets/d/1xeffdVR4w\_UJNEsyQjt\_KEL\_p3VqfX6O8-QVZEPu4XA/edit#qid=0">https://docs.google.com/spreadsheets/d/1xeffdVR4w\_UJNEsyQjt\_KEL\_p3VqfX6O8-QVZEPu4XA/edit#qid=0</a>

# **Testing**

### Administrator application

Andreas Runfors - final acceptance test

#### End-user application

- End-users feedback
  - Andreas Runfors & Erik Hällström
  - Random people affiiated to this course

### Questions
